

Insight

Insight — Your Private, AI-Powered Knowledge Engine

Overview

In today's economy, data is an organization's most valuable asset — but also its biggest liability.

Enterprises in law, healthcare, finance, defense, and government are drowning in unstructured documents, images, and multimedia content. They know AI could unlock enormous productivity and insight — but the most powerful tools, like ChatGPT or Claude, require sending sensitive data to external servers.

For many organizations, that's simply not an option.

Insight solves this.

We deliver **private AI infrastructure + offline AI software** in a single turnkey bundle — **no internet required**, no cloud dependencies, no data exposure.

It's a **pre-configured AI system** that works out of the box, understands both **text and images**, remembers context across sessions, and can be tailored to specific workflows — from medical case analysis to legal clause extraction to financial risk review.

We don't just sell software — we deliver the **hardware + software bundle** optimized to run in **air-gapped or high-security environments**, ensuring complete **data sovereignty and compliance**.

The Problem

Regulated and security-critical industries face a fundamental trade-off when it comes to AI adoption:

1. **Use cloud AI services** and risk compliance violations under GDPR, HIPAA, ITAR, PCI-DSS, or sector-specific rules.
2. **Build their own AI infrastructure** — requiring months (or years) of R&D, expensive GPU hardware, and deep technical talent they don't have.

Neither path is realistic for most organizations:

- Cloud AI = **risk, dependency, and legal exposure.**
- DIY AI = **cost, complexity, and slow time-to-value.**

This leaves entire industries **locked out of AI's benefits.**

It's not that they don't want AI — it's that the AI they can legally and safely use doesn't exist in a form they can adopt easily.

The Insight Solution

Insight removes this barrier entirely by delivering a **plug-and-play offline AI platform** that is:

Fully Offline

- Runs entirely within the customer's infrastructure.
- Works without internet connectivity, perfect for **air-gapped environments** or remote secure facilities.

Text + Image Understanding

- Reads, analyzes, and answers questions about **all major file types**: PDFs, Word docs, spreadsheets, presentations, scanned documents, and technical diagrams.

Persistent Context

- Remembers previous interactions and retains knowledge across sessions for deeper, more natural interaction.

Task-Specific AI Agents

- Pre-configured and/or custom-built agents tailored to each customer's workflows.
- Examples:
 - **Legal:** clause extraction, case summarization, contract comparison.
 - **Healthcare:** patient record summarization, imaging metadata extraction.
 - **Finance:** quarterly report comparison, anomaly detection in transactions.

Binary Vector Indexing for Speed

- Embeddings are quantized into binary format for **sub-30ms retrieval** even with tens of millions of document chunks.
- Optimized for **A100-class GPU servers** for maximum throughput.

Compliance by Design

- Encrypted local storage.
- Role-based access control tied to enterprise identity systems.
- Tamper-evident audit logs.

Hardware + Software Bundle

- Delivered as a **ready-to-deploy package**: secure server, optimized AI stack, and pre-installed agents.
 - No vendor lock-in, no hidden cloud services.
-

Why Insight Wins

Insight is **not** just another open-source RAG setup or AI toolkit. It is:

- **Turnkey** — Pre-installed, pre-configured, ready to use day one.
- **Workflow-Tuned** — Agents are designed for specific industry needs, not generic Q&A.
- **Compliance-First** — Engineered from day one for regulated industries.
- **Ownership-Based** — One-time purchase, no per-query fees, no API dependency.
- **Future-Proof** — Modular design allows adding new agents without changing the entire system.

Where others offer **AI-as-a-Service**, Insight offers **AI-as-an-Asset** — one you own, control, and can run forever.

Traction to Date

- **MVP Complete** — Built with **LLaMA 3.2 Vision**, document-based RAG, multimodal OCR, and context-aware QA.
 - **Beta Agents Live** — Summarization, extraction, multimodal Q&A, and structured document comparison.
 - **Performance Benchmarked** — Binary embeddings + Qudrant vector database hitting **sub-30ms retrieval** on 30M+ vectors.
 - **Market Interest** — Early conversations with law firms, healthcare providers, and security consultants.
-

Funding Request

We are raising **£500,000 pre-seed** to:

1. **Acquire Infrastructure** — A100-class GPU servers, binary indexing stacks, high-performance local storage.
2. **Build Core Team** — Machine learning engineer, backend developer, product designer.
3. **Secure Workspace** — Dedicated, security-compliant development and testing facility.
4. **Run Pilots** — Deploy in legal, healthcare, and government test environments.
5. **Fund Runway** — 8–12 months of full-time development, QA, and go-to-market execution.

With this funding, we will deliver a **production-ready offline AI platform** with workflow-specific agents, live pilots, and clear customer validation — ready for a seed round.

Market Opportunity

- **500,000+ enterprises** operate under non-negotiable data laws.
- Annual spend per org on privacy-first knowledge systems: **£10K – £1M**.
- Cloud AI is legally or practically off-limits for these customers.

Total Addressable Market (TAM):

- Enterprise AI spending projected to hit **\$500B by 2027** (IDC).
- Enterprise Content Management market expected to exceed **\$100B by 2028** (MarketsandMarkets).

Insight sits at the **intersection** of these two markets — offering AI-powered knowledge systems where no one else can operate.

Business Model

One-time product sale of **hardware + software bundles** with optional paid services.

Packages:

1. **Insight Desktop** – Small teams, £3K–£5K.
2. **Insight Server** – Departments, £15K–£50K.
3. **Insight Enterprise** – Large orgs, £75K+.

Optional Services:

- Extended software updates (annual).

- Onboarding & workflow integration (one-time).
 - Custom agent development for specific use cases.
 - SLA-based support tiers.
-

The Vision Beyond the Product

While the immediate product is an **offline AI bundle for regulated industries**, the architecture sets the stage for:

- **Custom domain-trained agents** for every vertical.
- **Cross-agent orchestration** to handle multi-step workflows.
- **Edge deployment** for secure field operations.

The **long-term vision** is a **modular, agentic AI platform** that adapts to any industry's knowledge ecosystem secure.
